Ozempic 2.0 weight-loss pill could be game-changer – 1st December 2025

Level 4

New weight-loss drugs could be launched next year. One of them is being dubbed "Ozempic 2.0". It is a pill version of the widely-used Ozempic. The company developing it said its clinical trials showed that it "lowered weight by an average of 10.5 per cent". A rival company also has a new pill. Its spokesman said: "We are moving with urgency toward global regulatory submissions." The drugs are now waiting for approval from the FDA in the USA.

The new medicines could make life easier for people with health conditions. The rival company said: "For the majority of patients, this could be the main medicine that they need to control their Type 2 diabetes as well as their obesity." Currently, the drug is in the form of a once-weekly injection. If approved, it could be a once-daily pill. The company said the drug could "redefine" how obesity is treated. It is likely that the new drugs will be cheaper.

Level 5

A new generation of game-changing weight-loss drugs could be launched next year. One treatment is being dubbed "Ozempic 2.0". This is a pill version of the widely-used Ozempic. Novo Nordisk, which is developing the new tablet, said its clinical trials showed that Ozempic 2.0 "lowered weight by an average of 10.5 per cent". Rival company Eli Lilly also has a new pill. Its spokesman, Kenneth Custer, said: "We are moving with urgency toward global regulatory submissions to potentially meet the needs of patients." The drugs are currently awaiting approval from the FDA in the USA.

The new medicines could make life easier for those hoping to lose weight, and for people with diabetes. Eli Lilly said: "For the majority of patients, this could be the main medicine that they need to control their Type 2 diabetes as well as their obesity." Currently, the drug is in the form of a once-weekly injection. The drug has to be refrigerated. The company said: "If approved, we are ready to offer a convenient, once-daily pill that can be scaled globally, removing barriers and redefining how obesity is treated around the world." It is also likely that the new drugs will be cheaper.

Level 6

The next generation of weight-loss drugs could be launched next year, and they could be game-changing. The treatment, being dubbed "Ozempic 2.0," is a pill version of the already widely-used Ozempic. Novo Nordisk, the pharmaceutical company developing the new tablet form, said its initial clinical trials revealed that Ozempic 2.0 "lowered weight by an average of 10.5 per cent". Rival company Eli Lilly is also working on a pill. Its executive vice president, Kenneth Custer, said: "We are moving with urgency toward global regulatory submissions to potentially meet the needs of patients." The drugs are currently awaiting approval from the Food and Drug Administration (FDA) in the USA.

The game-changing medicines could make life much easier for those hoping to shed weight, and for people with diabetes. Eli Lilly Chief Scientific Officer Dan Skovronsky said: "For the majority of patients, this could be the main medicine that they need to control their Type 2 diabetes as well as their obesity." Currently, the drug is administered in the form of a once-weekly injection via an injectable pen. The pen has to be refrigerated. Mr Custer told reporters: "If approved, we are ready to offer a convenient, once-daily pill that can be scaled globally, removing barriers and redefining how obesity is treated around the world." It is also likely that the new treatment will be cheaper.
